

CASE STUDY - HOUSING ASSOCIATION

PROJECT

Validation and improving security strategy with technical risk advisory

CUSTOMER

A community housing organisation that covers construction, community regeneration and support across Wales.

The Challenge

Having finished the latest security initiatives around endpoints, cloud-based email, monitoring and logging, the organisation was concerned about the effectiveness of its latest changes.

The Solution

This organisation opted to work with Cyphere to validate and improve their controls within hybrid environment. It involved a tailored approach of assessments, reviews and risk remediations.

RESULTS

- Identified and demonstrated proof of concept on how a cloud misconfiguration could lead to data leakage and theft
- Understanding of threats related to cloud deployments and hybrid environments.
- The latest health check meant the customer can view clear gaps in their strategy, including planned and strategic risk remediations.
